# 2009 Workshop

Mapping
Cyber Assets to Missions and Users

Workshop Goals

Define

Value What is the **value** of accurate and dynamic mapping of cyber assets to missions and users?

Impacts What are the **types of impacts** we need to address?

Measurement What **methods** can we apply to measure these impacts?

Create

Scenarios **Illustrate the impacts** of a failed network asset on missions and users.

Models **Describe the complex relationships** between cyber assets, missions, users, and other entities.

Identify

Data Sources Is there network data that can be mined to **automatically populate** the model?

Research What burning research questions can, if answered, **contribute to our understanding** of impact assessment?
